

Question 1: Define the UX design process and explain the fundamental principles of User-Centered Design (UCD). How does UCD shift the focus of development from technical capability to user satisfaction?

Question 2: Explain the role and effectiveness of mind mapping as a technique in the early stages of UX design. How can it be used to organize project requirements or structure information architecture?

Question 3: Compare and contrast the following three UX research methods based on the data they produce, their suitability for different project stages, and their potential limitations:

- **User Interviews**
- **Surveys**
- **Competitive Analysis**

Question 4: Design a hypothetical scenario where you must choose between conducting qualitative user interviews or quantitative surveys. Justify your choice based on the type of insights you are seeking to uncover.

Question 5: What is a user persona, and why is it considered a critical tool for maintaining empathy throughout the design process? Detail the elements that should be included in a well-constructed persona.

Question 6: Describe the purpose of a user journey map. How does visualizing the user's experience across different touchpoints help designers identify pain points and opportunities for improvement?

Question 7: Discuss how the following ideation techniques facilitate creative problem-solving in UX design:

- **Mood Boards:** How do they help establish visual direction and tone before high-fidelity design begins?
- **Brainstorming:** What are the rules of an effective brainstorming session to ensure a wide range of ideas?
- **Sketching:** Why is "low-fidelity" sketching often superior to high-fidelity digital prototyping during the initial ideation phase?
